

U.S. BUDGET VS. FAMILY BUDGET

FIGURES BASED ON THE 2016 BUDGET

The median family income in the U.S. is **\$54,000.**

If a family spent money like the government, it would spend **\$64,000** per year ...

... which means it would have put **\$10,000** on the credit card in 2016 ...

... despite already being **\$272,000** in debt.
